► OPERATION

1. A continuous, invisible light beam is emitted from the object lock infrared sensor.

2. As the user enters the beam's effective range, 22" - 42" (559 mm-1067 mm), the object lock infrared sensor senses the user.

3. When the user steps away from the object lock infrared sensor, the circuit initiates the flushing cycle to flush the fixture. The circuit then automatically resets and is ready for the next user.
